**DATAGUISE EXPANDS DOWNLOAD VERSION OF ITS
DGDISCOVER SOLUTION TO SUPPORT ORACLE DATABASE ENVIRONMENTS**

*Trial of leading sensitive data discovery and auditing software now available to
organizations with Oracle® Database architectures*

Fremont, CA, May 13, 2010 – dataguise™ (<http://www.dataguise.com>), a leading innovator of security solutions for protecting sensitive data across the enterprise, today announced the expansion of its **dgddiscover**™ database security solution to Oracle® database environments. **dataguise**'s industry-leading **dgddiscover** solution is designed to find structured database repositories across the network and then identify the data at risk within the database. Recent research reports¹ estimate that nearly 25 percent of enterprise organizations are utilizing Oracle database technology; the 14-day free trial version of **dgddiscover** for Oracle now allows these organizations to perform a comprehensive audit and quickly determine where sensitive information resides on the enterprise, a critical step in securing data.

“When building a successful security strategy, it is imperative that organizations have a complete, holistic view of their database repositories; without this insight, it is extremely difficult to locate sensitive data and protect the database from potential exploits,” said Allan Thompson, EVP of Operations at **dataguise**. “With the trial version of **dgddiscover** now available for Oracle environments, enterprises of all sizes --- from small businesses to large, global corporations --- have access to the best-in-breed discovery and auditing technology currently available on the market and can leverage these tools to fulfill regulatory compliance requirements, reduce the impact of a data breach should it occur, and bolster their overall security posture.”

¹ IDC Server workloads Forecasts and Analysis Study, 2005-2010

Once the no charge trial period for **dgdiscover** has concluded, organizations can easily convert to the full version of **dgdiscover** for Oracle environments for less than US\$10,000.

Availability

The **dataguisse dgdiscover** for Oracle trial version is available to approved organizations at no charge during the designated evaluation period. Request to download the product can be made online at: <http://dataguisse.com/account>. An online conversion to **dgdiscover** for Oracle Databases starts at less than US\$10,000 depending on number of databases scanned.
