DATAGUISE ADDS SUPPORT FOR IBM DB2 DATABASE ENVIRONMENTS TO THE TRIAL VERSION OF ITS DGDISCOVER SOLUTION

Organizations with IBM DB2 architectures can now quickly and seamlessly access the best-in-breed sensitive data discovery software

Fremont, CA, June 8, 2010 – dataguise™ (<http://www.dataguise.com>), a leading innovator of security solutions for protecting sensitive data across the enterprise, today announced that the free trial version of its **dgdiscover**™ database security solution now supports IBM DB2 environments. By leveraging the 14-day trial version of **dgdiscover**, IBM DB2 users can conduct an extensive audit of their database environment and quickly determine where sensitive information resides throughout the enterprise. **dgdiscover** for IBM DB2 is an automated, easy-to-use software solution that provides organizations with the best-in-breed data discovery and auditing technology currently available on the market, allowing enterprises of all sizes to develop a robust and cost-effective data security strategy.

“Organizations with database architectures in place will find that it is extremely difficult to accurately search for and locate all of the sensitive data residing on their network, especially with manual processes or ‘home-grown’ technology in place,” said Allan Thompson, EVP of Operations at **dataguise**. “By expanding the support for our **dgdiscover** trial version to IBM DB2 environments, we’re providing organizations with powerful data discovery and auditing technology that enables greater visibility of the network, significantly increasing an organization’s overall security posture --- all within a few minutes of a simple download.”

Once the no charge trial period for **dgdiscover** has concluded, organizations can easily convert to the full version of **dgdiscover** for IBM DB2 environments for less than US\$10,000.

Availability

The **dataguise dgdiscover** for IBM DB2 trial version is available to approved organizations at no charge during the designated evaluation period. Request to download the product can be made online at: <http://dataguise.com/account>. An online conversion to **dgdiscover** for IBM DB2 databases starts at less than US\$10,000 depending on number of databases scanned.
