**DATAGUISE PARTNERS WITH STATSCOM TO DELIVER NEXT-GENERATION
DATA SECURITY TECHNOLOGY TO FEDERAL GOVERNMENT AGENCIES**

*Strategic partnership with IT services provider will expand reach, increase
dataguise's influence in the federal and public sector*

Fremont, CA, July 26, 2010 – dataguise™ (<http://www.dataguise.com>), a leading innovator of security solutions for protecting sensitive data across the enterprise, today announced its strategic partnership with [Statscom](#), a leading information technology and technical services provider for U.S. federal government agencies. As part of the reseller agreement, Statscom will work with current dataguise partner [immixGroup](#) to provide governmental organizations with the dataguise dgdiscover™ and dgmasker™ security solutions.

In addition, Statscom will provide Section 508, FIPS 140-2 and [Common Criteria EAL 2+ Certification](#), ensuring that the specification, implementation and evaluation of dataguise technology has been conducted in a rigorous and standard manner in order to meet strict federal security regulations.

dataguise recently added two federal government industry veterans to its executive leadership team – [Jim Flyzik](#) as a new advisory board member and [Joe Marino](#) as VP of Federal Sales. These appointments, coupled with strategic partnerships secured with long-standing government technology providers like [immixGroup](#), further support dataguise's ongoing strategy of deepening its commitment to and influence in the federal and public sector.

“We are very pleased to partner with dataguise and look forward to working with the leading database security technology provider to expand their reach and influence among key government agencies,” said Sandesh Mohan, CTO of Statscom. “dataguise's commitment to the federal and public sector is clear and its database security solution offering is unsurpassed. By leveraging dataguise's next-generation security solutions and Statscom's sales and

technical expertise, government organizations and agencies can utilize the resources needed to build a robust, effective, end-to-end strategy that protects sensitive data, mitigates risk and improves their overall security posture.”

dataguise offers the first integrated product offering of its kind to combine both discovery of databases containing sensitive data, identification of the data at risk in the database and Masking In Place (MIP) of the information for seamless security. **dgdiscover** quickly determines where sensitive information resides throughout the enterprise and **dgm masker**, with its Masking On-Demand™ capability, then de-identifies information targeted for use outside of the production network, providing organizations with the technology needed to reduce their risk profile.

“For government organizations, having a robust set of solutions in place that protect sensitive data from authorized and unauthorized access is an absolute necessity to maintain the highest level of security in mission critical systems,” said Allan Thompson, EVP of Operations for **dataguise**. “This partnership with Statscom is key for **dataguise**, as we continue to assert the importance for organizations in the government sector to deploy vigorous, all-inclusive database security solutions -- like those offered by **dataguise** -- as an essential component to a successful security strategy. We plan to leverage our relationships with leading sales and service providers in the government industry, like Statscom and immixGroup, to expand our reach and increase our customer base in the federal and public sector.”
